<b>Section 2.2</b>		<b>Control of environmental exposure - these can be hidden or removed in this consumer GES</b>

	No exposure assessment presented for the environment. [G40]	
<b>3.1. Health</b>		
Health sub-headings		Predicted exposures are not expected to exceed the applicable consumer reference values when the operational conditions/risk management measures given in section 2 are implemented.
<b>Section 4</b>		<b>Guidance to check compliance with the Exposure Scenario</b>

4.1. Health		
Health sub-headings		The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated. G21 Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. G23

Additional good practices (Operational Conditions and Risk Management Measures) beyond the REACH Chemical Safety Assessment established within Chemical Industry are also advised and communicated through Safety Data Sheets but are not necessarily required to control risk as laid out in section 10.9.

These additional measures are presented in the appendix to section 10 and are coded by curly brackets. To control risks as described by RCRs presented in section 10.9 only Operational Conditions and Risk Management measures as described in section 2.2 above (coded by square brackets in the appendix to section 10) have been taken into account.

**(ii) 9.9.2 Exposure Estimation**

**1) 9.9.2.1 Human Health**

The endpoint for which the available data may trigger a qualitative risk characterisation includes eye irritation and is described in section 10. This qualitative CSA approach aims to reduce/avoid contact when there is no basis for setting a DNEL or DMEL for a certain human health endpoint, i.e. when the available data for this effect do not provide quantitative dose-response information, but there exist toxicity data of a qualitative nature.

Exposure Estimation for all other human health endpoint covered by DNEL or DMEL is performed in context of risk assessment and set in relation to the respective DNEL/DMEL(s) as shown in the Appendix to section 10. Resulting risk characterization ratios (RCR) are presented in section 10.9.

**2) 9.9.2.2 Environment**

In the chemical safety assessment performed according to Article 14(3) in connection with Annex I section 3 (Environmental Hazard Assessment) and section 4 (PBT/vPvB Assessment) no hazard was identified. Therefore according to REACH Annex I (5.0) an exposure estimation and risk characterization is not necessary; however a qualitative risk assessment is provided in section 10.
